Experiment - 3

Student Name: Aditya Kumar Singh

UID: 23BCS11734

Branch: BE-CSE

Section/Group: KRG-2B

Semester: 5th

Date of Performance: 23/9/25

Subject Name: Project Based Learning in Java

Subject Code: 23CSH-304

Aim: To write a Java program to calculate the square root of a number entered by the user. Use try-catch to handle invalid inputs(like negative numbers or non-numeric values).

Objective: To understand how to handle invalid inputs using try-catch blocks in java.

Input Used : Java exception classes, try-catch block, Scanner class for input.

Procedure:

1. Prompt the user to input a number.
2. Convert input to a number type using Scanner.
3. Use a try-catch block to handle NumberFormatException and check for negative values.
4. If number is negative, throw exception.
5. If number is valid, print its square root.

Sample Input Enter

a number: -19

Sample Output -

Error: Cannot calculate square root of a negative number.

Code -

```
package intro_day1; import
java.util.List; import
java.util.Scanner; import
java.util.ArrayList;

class Notvalidinput extends Exception{
public Notvalidinput(String msg) {
super(msg);
```

}

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
} class practice{ public static void
main(String args[]) { Scanner sc=new
Scanner(System.in);
System.out.println("Enter num: "); int
x=sc.nextInt(); try { if(x<0) {
throw new Notvalidinput("square root not valid for negatives");
} int
low=1,high=x,ans=0;
while(low<=high) { int
mid=(low+high)/2;
if(mid*mid>x) {
high=mid-1; }
else if(mid*mid<x) {
ans=mid; low=mid+1;
}
else {
System.out.println(mid);
return;
}
}
System.out.println(ans);
}
catch(Notvalidinput e) {
System.out.println("error: "+e.getMessage());
}
}
}
```

Output -
