Experiment - 1

Student Name: Aditya Kumar Singh

UID: 23BCS11734

Branch: BE-CSE

Section/Group: KRG-2B

Semester: 5th

Date of Performance: 12/8/25

Subject Name: Project Based Learning in Java

Subject Code: 23CSH-304

Aim: To develop Java programs to analyze strings, perform matrix operations, and implement basic banking system functionality.

Easy-level Problem-

Aim: To write a Java program to analyze a string input by the user. The program should: Count the number of vowels, consonants, digits and special characters in the string.

Objective: To understand string manipulation in Java using concepts like java basic input and string handling.

Procedure:

1. Prompt user to enter a string.
2. Traverse each character in the string.
3. Classify each character using conditions:
 - If the character is vowel(a,e,i,o,u) increment the vowel count.
 - If it is consonant(alphabetic or not a vowel), increment the consonant count.
 - If digit(0-9), increment digit count.
 - If none of the above and not a space, it is a special character.
4. Print the count of vowels, consonants, digits and special characters.

Sample Input -

Enter a string: Hello World 2025!

Sample Output -

Vowels : 3

Consonants : 7

Digits: 4

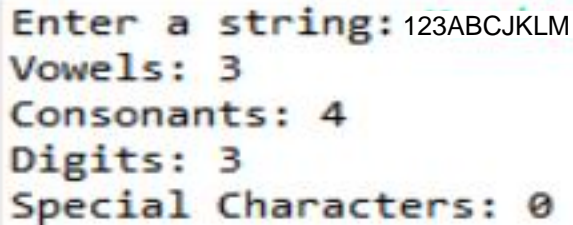

Special characters: 3

Code -

```
package exp1;
import java.util.Scanner;

public class easy {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter a string: ");
        String str = sc.nextLine();
        int vowels = 0, consonants = 0, digits = 0, special = 0;
        str = str.toLowerCase();
        for (int i = 0; i < str.length(); i++) {
            char ch = str.charAt(i);
            if (ch >= 'a' && ch <= 'z') {
                if ("aeiou".indexOf(ch) != -1) {
                    vowels++;
                } else {
                    consonants++;
                }
            } else if (ch >= '0' && ch <= '9') {
                digits++;
            } else if (ch != ' ') {
                special++;
            }
        }
        System.out.println("Vowels: " + vowels);
        System.out.println("Consonants: " + consonants);
        System.out.println("Digits: " + digits);
        System.out.println("Special Characters: " + special);
    }
}
```

Output -

```
Enter a string: 123ABCJKLM
Vowels: 3
Consonants: 4
Digits: 3
Special Characters: 0
```

Medium- Level Problem -

Aim : To write a Java program to perform matrix operations(addition, subtraction, and multiplication) on two matrices provided by the user. The program need to check the dimensions of the matrices to ensure valid operations.

Objective: Understand multidimensional array manipulation and matrix operation validation using concepts of Java multidimensional array and control structures.

Procedure:

1. Accept user input for 2 matrices (2D arrays).
2. Check that the dimensions of matrices are valid for the desired operations.
 - For addition/subtraction :dimensions must be equal.
 - For multiplication: columns of Matrix A = rows of Matrix B.
3. Use nested loops to perform:
 - Addition : $result[i][j] = matrixA[i][j] + matrixB[i][j]$
 - Subtraction : $result[i][j] = matrixA[i][j] - matrixB[i][j]$
 - Multiplication : $result[i][j] = \sum(matrixA[i][k] * matrixB[k][j])$
4. Display the resulting matrices.

Sample Input :

Matrix 1: 1 2
 3 4
Matrix 2: 5 6
 7 8

Sample Output:

Addition:

6 8

10 12

Subtraction:

-4 -4

-4 -4

Multiplication:19 22

43 50

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Code :

```
package exp1;
import java.util.Scanner;

public class medium {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        // Input dimensions
        System.out.print("Enter rows and columns of first matrix: ");
        int r1 = sc.nextInt();
        int c1 = sc.nextInt();
        System.out.print("Enter rows and columns of second matrix: ");
        int r2 = sc.nextInt();
        int c2 = sc.nextInt();

        int[][] A = new int[r1][c1];
        int[][] B = new int[r2][c2];

        System.out.println("Enter elements of first matrix:");
        for (int i = 0; i < r1; i++)
            for (int j = 0; j < c1; j++)
                A[i][j] = sc.nextInt();

        System.out.println("Enter elements of second matrix:");
        for (int i = 0; i < r2; i++)
            for (int j = 0; j < c2; j++)
                B[i][j] = sc.nextInt();

        // Addition & Subtraction
        if (r1 == r2 && c1 == c2) {
            System.out.println("Addition:");
            for (int i = 0; i < r1; i++) {
                for (int j = 0; j < c1; j++) {
                    System.out.print((A[i][j] + B[i][j]) + " ");
                }
                System.out.println();
            }

            System.out.println("Subtraction:");
            for (int i = 0; i < r1; i++) {
                for (int j = 0; j < c1; j++) {
                    System.out.print((A[i][j] - B[i][j]) + " ");
                }
                System.out.println();
            }
        } else {
            System.out.println("Addition/Subtraction not possible (dimension mismatch).");
        }
    }
}
```

```
// Multiplication
if (c1 == r2) {
    System.out.println("Multiplication:");
    int[][] result = new int[r1][c2];
    for (int i = 0; i < r1; i++) {
        for (int j = 0; j < c2; j++) {
            for (int k = 0; k < c1; k++) {
                result[i][j] += A[i][k] * B[k][j];
            }
        }
        System.out.print(result[i][j] + " ");
    }
    System.out.println();
} else {
    System.out.println("Multiplication not possible (dimension mismatch).");
}
}
```

Output:

```
Enter rows and columns of first matrix: 2 2
Enter rows and columns of second matrix: 2 3
Enter elements of first matrix:

3 4
5 6
Enter elements of second matrix:
5 6
1 2
6 5
Addition/Subtraction not possible (dimension mismatch).
Multiplication:
23 42 23
37 66 35
```

Hard -level Problem-

Aim : To create a Java program to implement a basic banking system with the following features:

- Account creation(Name , Account number,).
- Deposit and withdrawal operations.
- Prevent overdraft by checking the balance before withdrawal.

Objective: Apply object-oriented programming concepts in a practical system using concepts like Java classes, objects and control structures.

Procedure:

1. Define a 'BankAccount' class with fields like name,account number , and balance.
2. Implement methods for:
 - deposit(double amount): Adds amount to balance.
 - withdraw(double amount): checks balance before subtracting.
3. In the main program, create a new account by taking user input.
4. Allow the user to perform deposit and withdrawal operations.
5. Display appropriate messages and updated balances.

Sample Input:

Create Account:

Name: John Doe

Account Number: 12345

Initial Balance: 1000

Deposit: 500

Withdraw: 2000

Sample Output:

Deposit successful! Current Balance: 1500

Error: Insufficient funds. Current Balance: 1500

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Code :

```
package easy_level;
import java.util.Scanner;

class BankAccount {
    String name;
    int accountNumber;
    double balance;

    BankAccount(String name, int accountNumber, double initialBalance) {
        this.name = name;
        this.accountNumber = accountNumber;
        this.balance = initialBalance;
    }

    void deposit(double amount) {
        balance += amount;
        System.out.println("Deposit successful! Current Balance: " + balance);
    }

    void withdraw(double amount) {
        if (amount > balance) {
            System.out.println("Error: Insufficient funds. Current Balance: " + balance);
        } else {
            balance -= amount;
            System.out.println("Withdrawal successful! Current Balance: " + balance);
        }
    }

    public class hard {
        public static void main(String[] args) {
            Scanner sc = new Scanner(System.in);

            // Account creation
            System.out.print("Enter Name: ");
            String name = sc.nextLine();
            System.out.print("Enter Account Number: ");
            int accNo = sc.nextInt();
            System.out.print("Enter Initial Balance: ");
            double balance = sc.nextDouble();

            BankAccount account = new BankAccount(name, accNo, balance);

            while (true) {
                System.out.println("\n1. Deposit\n2. Withdraw\n3. Exit");
                System.out.print("Choose an option: ");
                int choice = sc.nextInt();
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
switch (choice) {  
    case 1:  
        System.out.print("Enter deposit amount: ");  
        double dep = sc.nextDouble();  
        account.deposit(dep);  
        break;  
    case 2:  
        System.out.print("Enter withdrawal amount: ");  
        double wd = sc.nextDouble();  
        account.withdraw(wd);  
        break;  
    case 3:  
        System.out.println("Exiting... Thank you!");  
        return;  
    default:  
        System.out.println("Invalid choice.");  
}  
}  
}
```

Output:

```
Enter Name: _____  
Enter Account Number: _____  
Enter Initial Balance: _____  
  
1. Deposit  
2. Withdraw  
3. Exit  
Choose an option: 2  
Enter withdrawal amount: 1600  
Withdrawal successful! Current Balance: 13400.0  
  
1. Deposit  
2. Withdraw  
3. Exit  
Choose an option: 3  
Exiting... Thank you!
```
