Subject Name: Project Based Learning in Java

Subject Code: 23CSH-304

Aim:

To build a Java program that performs CRUD (Create, Read, Update, Delete) operations on a Product table using JDBC with transaction handling.

Objective:

To learn how to implement CRUD operations using JDBC, apply transaction handling, and use a menu-driven program for database operations.

Apparatus / Input Used:

- Java (JDK 8 or above)
- MySQL Database
- JDBC API
- MySQL Table: **Product(ProductID, ProductName, Price, Quantity)**
- IDE: Eclipse / IntelliJ / VS Code

Procedure:

- 1 Create a MySQL table **Product(ProductID, ProductName, Price, Quantity)**
 - . Load the MySQL JDBC Driver using Class.forName()
- 2 Establish a connection using DriverManager.getConnection()
 - . Create a menu-driven program with options: Add, View, Update, Delete
- 3 Use **PreparedStatement** for secure queries
 - . Use connection.setAutoCommit(false) for manual transaction mode
- 4 Use commit() on successful operations
 - . Use rollback() on errors
- 5 Close all JDBC resources properly (Connection, Statement, ResultSet)
 - .
 - 6
 - .
 - 7
 - .
 - 8

Program Code:

```
import java.sql.*;
import java.util.Scanner;

public class ProductCRUD {
    public static void main(String[] args)
    { Scanner sc = new Scanner(System.in);

        try
        { Class.forName("com.mysql.cj.jdbc.Driver");
            Connection con = DriverManager.getConnection(
                "jdbc:mysql://localhost:3306/testdb", "root", "password"
            );

            con.setAutoCommit(false);
            int choice;

            while (true) {
